Dear Team,

Some ideas.

Pump sewerage over the range for agriculture. You can then sell as per river water, and a huge multiplier. All western cities and towns draw from the same rivers they send treated water into.

Make use of your dams, or more, for pumped hydro power storage. You have the money and tech to make it happen.

Storm water. Catch and pump back up into dams on the great dividing range. Cheaper than desal.

Ausies want thrifty initiatives. Not an expensive desal which takes a lot of coal power.

Look at your specialties, and go for it. People want to see better, and no more boring go nowhere ideas. Be like spacex. Dream big and make inspiring incremental differences.

Thankyou
